ABSTRACT OF THE DISCLOSURE

- 2 A packaging method for preparing thin integrated circuits comprises:
- forming a circuit layer with multiple sections on a substrate; attaching
- 4 multiple electronic elements to the circuit layer between two sections of the
- 5 circuit layer; applying an encapsulant layer to protect the electronic elements;
- 6 and removing the substrate to expose the circuit layer. By removing the
- substrate, the exposed circuit can be connected to another circuit board and
- 8 the integrated circuit is much thinner.
